Count Paths for a Sum (medium)

Problem Challenge 1

Solution Review: Problem Challenge 1

Introduction

This pattern is based on the **Depth First Search (DFS)** technique to traverse a tree.

We will be using recursion (or we can also use a stack for the iterative approach) to keep track of all the previous (parent) nodes while traversing. This also means that the space complexity of the algorithm will be $O(H)$, where 'H' is the maximum height of the tree.

Let's jump onto our first problem to understand this pattern.

Interviewing soon? We've partnered with Hired so that companies apply to you, instead of the other way around. [See how](#)
