Pattern: In-place Reversal of a LinkedList

● Introduction

○ Reverse a LinkedList (easy)

○ Reverse a Sub-list (medium)

○ Reverse every K-element Sub-list (medium)

○ Problem Challenge 1

○ Solution Review: Problem Challenge 1

○ Problem Challenge 2

Introduction

In a lot of problems, we are asked to reverse the links between a set of nodes of a **LinkedList**. Often, the constraint is that we need to do this in-place, i.e., using the existing node objects and without using extra memory.

In-place Reversal of a LinkedList pattern describes an efficient way to solve the above problem. In the following chapters, we will solve a bunch of problems using this pattern.

Let's jump on to our first problem to understand this pattern.
